

PENDING CLAIMS

- 29. A method for directly inhibiting HIV entry into a cell comprising the step of contacting said cell with a composition comprising a peptide of 8 to 24 residues comprising the sequence RAFVTIGK (SEQ ID NO:5), wherein said cell is in a human subject.
- 30. The method of claim 29, wherein said peptide is 8 residues in length.
- 31. The method of claim 29, wherein said peptide is 15 residues in length.
- 32. The method of claim 31, wherein said peptide comprises the sequence RIORGPGRAFVTIGK (SEQ ID NO:1).
- 33. The method of claim 29, wherein said peptide is 24 amino acids in length.
- 34. The method of claim 33, wherein said peptide comprises the sequence NNTRKSIRIQRGPGRAFVTIGKIG (SEQ ID NO:3).
- 35. The method of claim 29, wherein said peptide is in the form of a multimer.
- 36. The method of claim 35, wherein said multimer comprises a single chain comprising repeating units of said peptide.
- 37. The method of claim 36, wherein said repeating units are bonded through one or two cysteine residues.
- 38. The method of claim 35, wherein said multimer comprises a spacer peptide to which multiple copies of said peptide are bonded.
- 39. The method of claim 38, wherein said spacer peptide comprises glycyl residues to which each of said multiple copies of said peptide are bonded.
- 40. The method of claim 38, wherein said spacer peptide forms a surfactant-like micelle.
- 41. The method of claim 29, wherein said composition is dispersed in a pharmaceutically acceptable aqueous medium.
- 42. The method of claim 29, wherein said composition is administered at a dosage range of between about 10 micrograms to about 500 milligrams.
- The method of claim 40, wherein dosage range is about 50 micrograms to about 1 milligram.
- 44. The method of claim 41, wherein said dosage range is about 100 micrograms.

- 45. The method of claim 29, further comprising contacting said cell with said composition a second time.
- 47. The method of claim [46] <u>29</u>, wherein said contacting comprises injection of said composition.
- 49. (New) A method for directly inhibiting HIV entry into a cell *in vitro* comprising the step of contacting said cell with a composition comprising a peptide of 8 to 24 residues comprising the sequence RAFVTIGK (SEQ ID NO:5).
